## HOW TO COUNT BOTH INLINE AND STANDARD PDFS ON INCOMING EMAIL

Within ThinkAutomation, you have a variable that will count attachments MSG_AttachmentCount) and one that will count inline attachments (MSG_AttachmentInlineCount).

However, if you want to count all pdfs (whether it be an inline or attached in the standard way), you can use a c sharp script that counts all the pdfs.

This is what you automation would look like:-

```
1  using System;
2  using System.Text.RegularExpressions;
3  using ThinkAutomationCoreClasses.Scripting;
4  public class ThinkAutomationScript
5  {
6      public string execute(currentMessage message)
7      {
8          try
9          {
10             string text = message.GetValue("Msg_Attachments"); // Replace with your actual text string
11             int count = Regex.Matches(text, ".pdf", RegexOptions.IgnoreCase).Count;
12             message.AddToLog($"The count of '.pdf' in the text string is: {count}");
13             return count.ToString();
14         }
15         catch (Exception e)
16         {
17             message.AddErrorToLog(e.Message);
18             return "";
19         }
20     }
21 }
```
