

Setting Email alerts for DVR Events on Durite Live

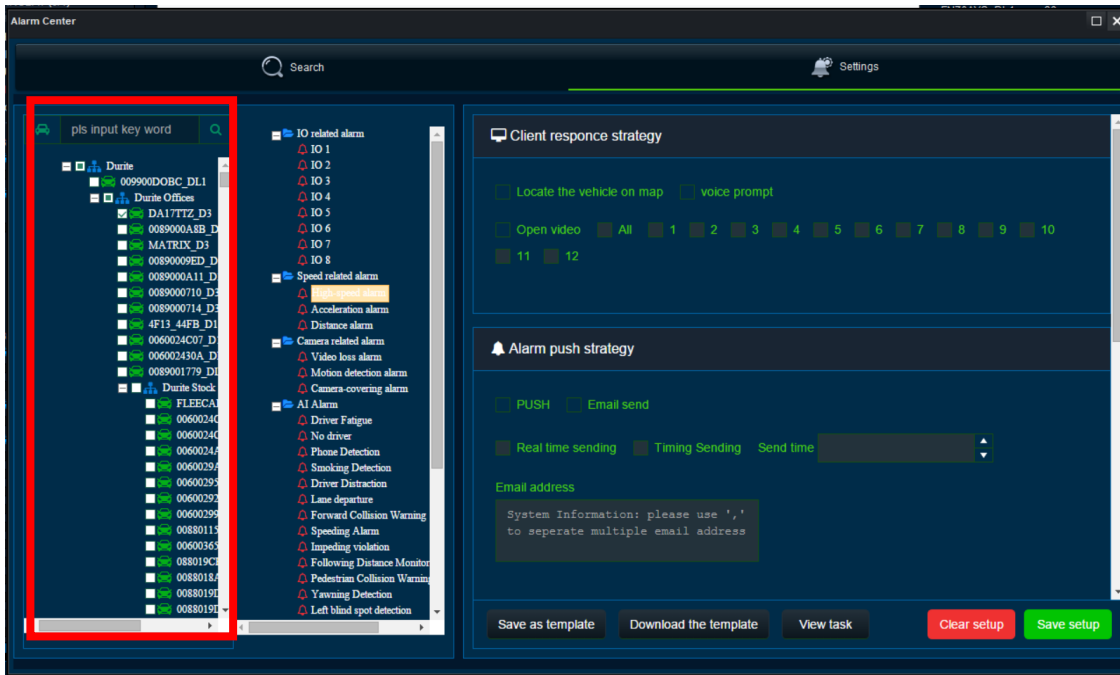

Log into Durite Live, and click on the Bell icon in the top right.

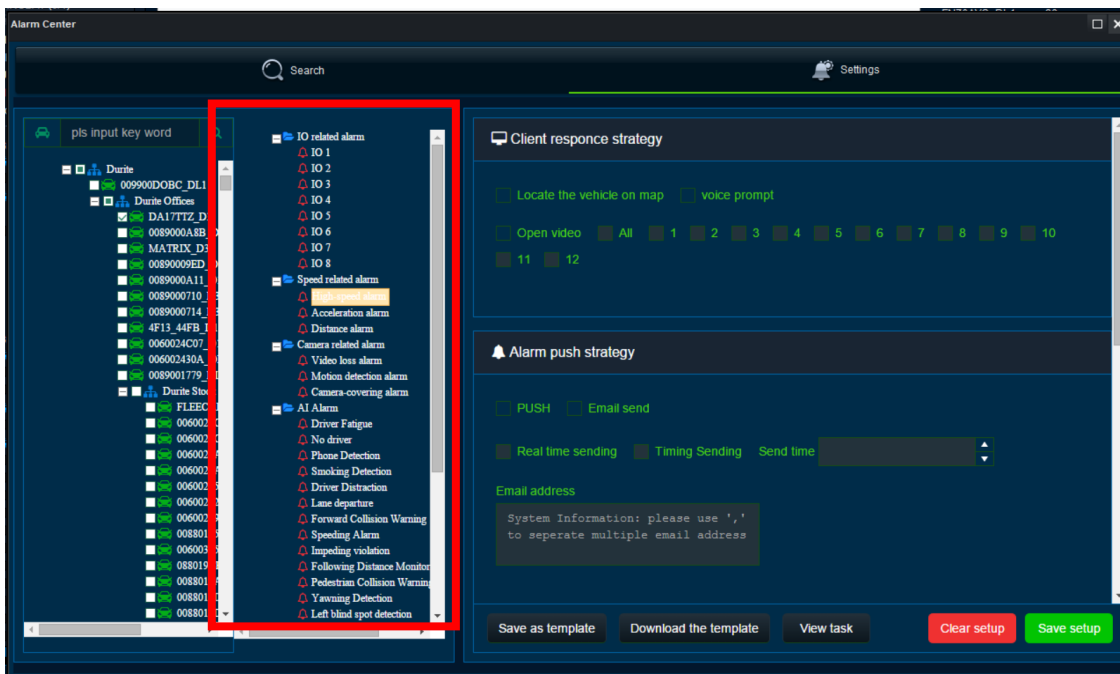

This will open a pop-up window. Along the top of this window, select the Settings.

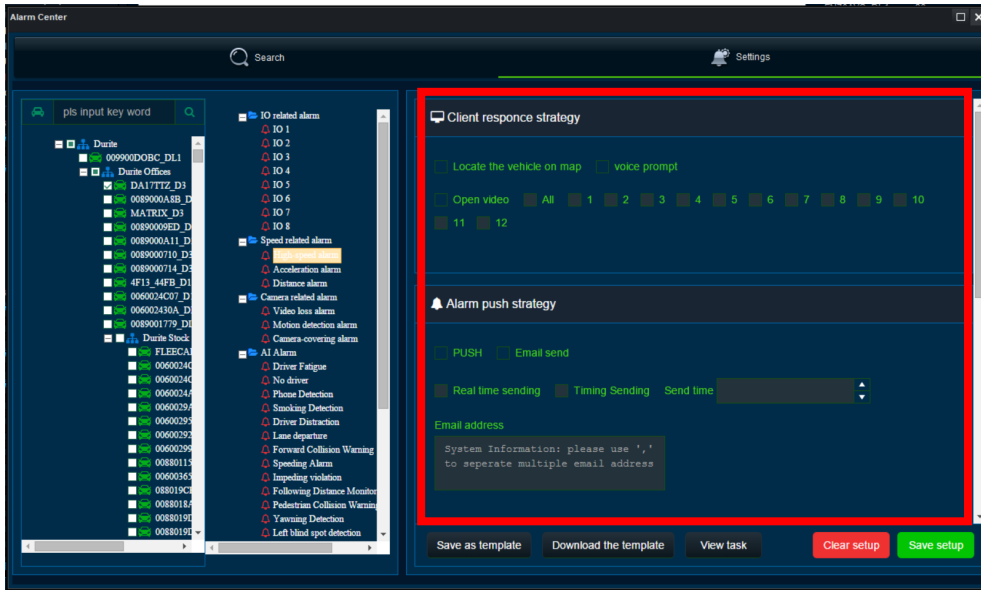

. Then in the list on the left, tick the vehicle you want to set an email alert for.

Then in the second list, select the alert you would like to be notified for.

On the right side of the window is where you will set what you want to happen when this alert has been triggered. If you want to receive an email, then in the Alarm Push Strategy section, you will need to tick the following options, "PUSH", "Email send", and "Real time sending". Then type in the email address of who you want to receive the email notification in the "Email address" box.

Then select Save. Once the DVR has restarted, when that alert is triggered, you should receive an email notification.
