

## DX / DL1 Formatting HDD on DVR

1. Log into the DVR Menu.

User name **admin**

Password **eagle**

Language English

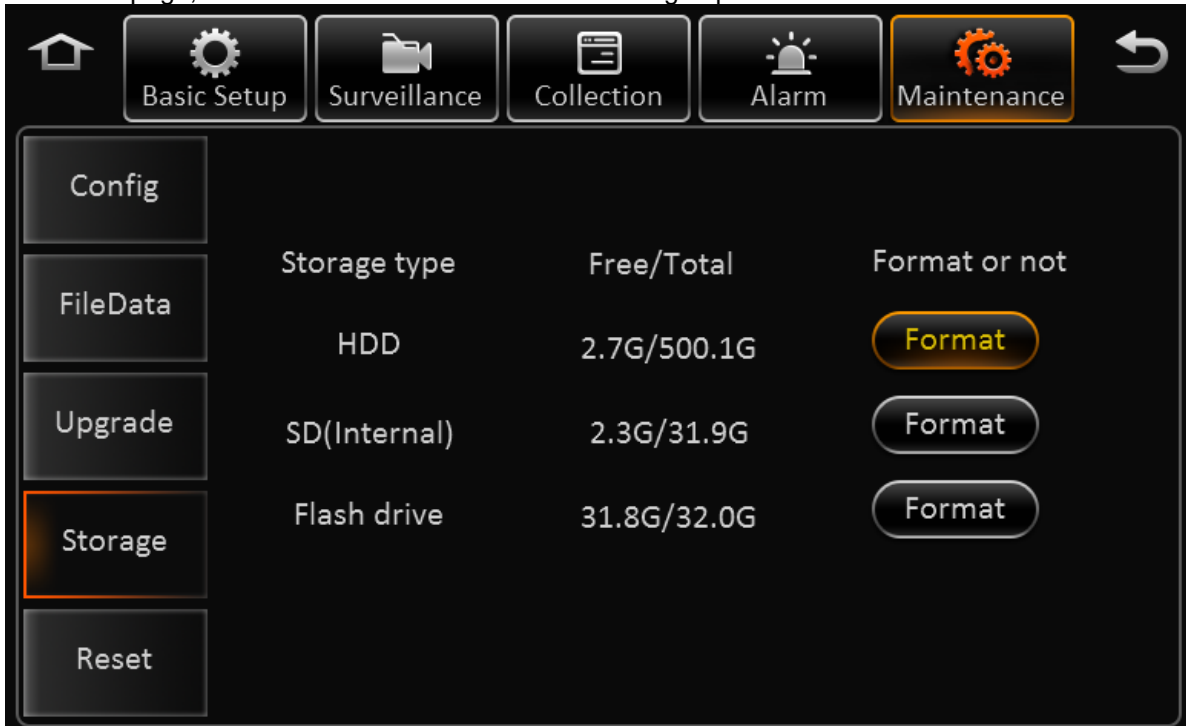

Login Cancel

2. Enter the Setup Menu.

- Now use the Top Bar to access Maintenance menu. Then on side bar Select Storage.

In this page, user can check and format all the storage options fitted.

**Storage type:** HDD, SD card (Internal), SD card (External), USB drive

**Free/Total**

- Not exist: Didn't find the HDD (not install or broken)
- Unformatted: Means the HDD has been detected, but unformatted.(New HDD)
- Capacity info: Display the correct info means HDD working fine

**Format:**

Click format and it will refresh the current formatted volume information after formatting successfully.

It can record after formatting successfully and no need to reboot up.

Once the DVR has been in use its important to make sure the HDD is functioning and there is enough free storage space.

It is also good practice to periodically Copy the HDD to an external storage so and data needed at a later date does not get overwritten so you can get footage at a later date if required.
