

Exporting Footage using 0-876-08 / 0-876-09

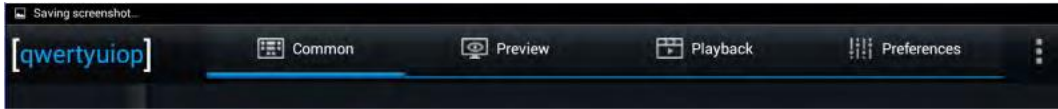

1. Step one will be to download easycheck app to smartphone / Tablet (available on Android and IOS).
2. Establish the WiFi connection from the Tablet or Smartphone with the Dashcam. [See Pairing Guide](#)
3. Once the Wifi connection is made you can now open the Easycheck App.

4. Login on the Easycheck app to the Dashcam (Username is admin, Password is eagle.) then press Login.

5. Now the App and Dashcam are connected Select the Playback tab.

6. From the Calendar select the day you wanted to get footage from.

7. Now select the channels you need footage from. Then Press next button

8. Now you will be able to view footage from the selected cameras to find the clip you need.

9. Now press Video Export.
10. Using the Time bar slide to start time then once set press start time.
11. Now use the time bar to select end time then press end time.
12. Now press the backup button.
13. Another sub window will show up with clip details, Start, End Times, Size of clip, remaining storage on the Device you are downloading footage to. Now select the Video(avi) Data as then the footage can be played back in most media players.
14. Now Press OK to start to download to the Device storage.
15. A new window with the download progress bar will come up.
16. IT will come up with message when completed the download
17. Now you can email the downloaded footage / copy from device to play back as required.
