

0-876-11 1080P Front IP Camera Adjusting Camera Angle

- Image below showing a poor installation against a good installation, Notice left-hand view is angled too low compared to the right-hand view which has been angled correctly.

Poor Viewing Angle

Correctly Adjusted Viewing Angle

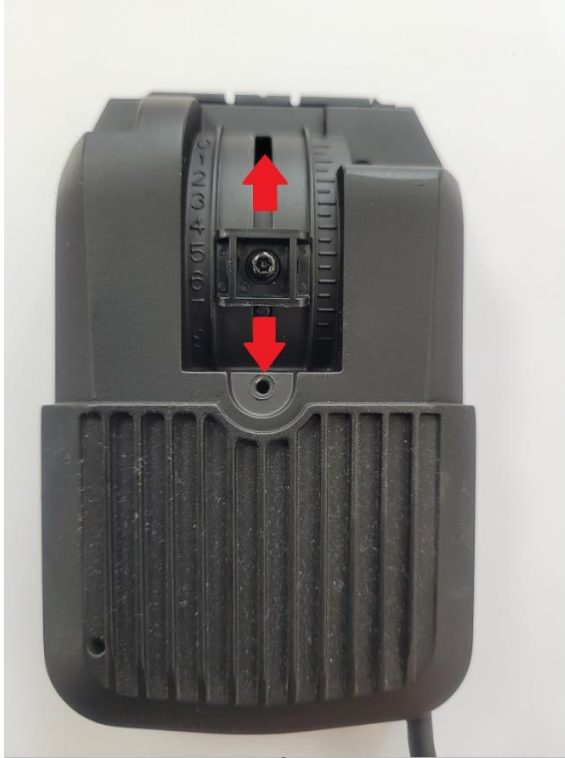

- Once the Camera has been mounted to the Windscreen. Using a T8H security torx screwdriver bit Remove the screw in image below then slide the Top Cover up.

- Once the Top Cover is removed you will need to loosen the Screw using the T8H Screwdriver.

- Now the Screw is loosened you can slide the adjuster up / down to get the correct angle for the Lens.

- Once the angle is set to view correctly Tighten up the Adjuster screw.
- Then slide the top cover back on and refit the screw.
